

Visual Slot Performance[®] Tool

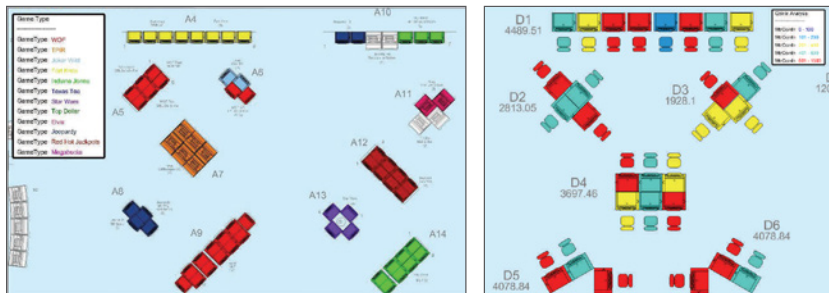

Heatmaps of Your Floor

Prepare to see your slot floor like never before. The IGT Visual Slot Performance[®] tool transforms data from across your casino floor into vibrant, full-color maps that are easy to interpret. Your team can now make quick and effective decisions, eliminating those endless hours evaluating data and statistics from multiple source systems in a tabular format.

Using the IGT Visual Slot Performance[®] tool's robust and flexible mapping options, you can see a single view of your performance data, summarized by section, bank or machine. Expose important spatial relationships on your floor that would otherwise go unnoticed.

Know what's happening right now with down-to-the-second updates on player activity and security-related events on your floor. Go one step further and eliminate the need for manual player searches by utilizing real-time alerts to find qualified players on your casino floor.

Get the insight you've been missing. Contact your IGT Account Manager.

Benefits

- Increase game play and customer satisfaction by identifying hot players quickly
- Save money by viewing new floor arrangements before machine moves
- Maximize revenue by identifying historically hot and cold areas of the floor and analyzing carded and uncarded play, net win by denomination, or specific machine events

Features

- User-friendly graphical interface that is easily grasped
- No CAD knowledge required
- Ability to import native computer-aided design (CAD) files directly into the application
- Text labeling for any performance summary can be displayed in tandem with color codes "painted on" by analyzers
- Print plotter-size casino floor maps that combine both labels and colors
